

INDUSTRIAL TRAINING KIT | BATCH 2026

DIGITAL MARKETING PROJECT 2

SEO Basics & Keyword Research

Building the Digital Highway — From Human Curiosity to Machine Logic.
Mastering Search Intent & Data-Driven SEO Strategy.

Role: Digital Marketing Specialist

Powered by: DecodeLabs

Welcome to the Team & Project Overview

Step into the role of a Digital Marketing Specialist at DecodeLabs

Project Goal

Perform complete keyword research for a technical training platform to capture search intent and attract high-converting organic traffic.

Key Requirements

- Identify relevant technical keywords
- Analyze 4 archetypes of search intent
- Calculate Keyword Golden Ratio (KGR)
- Provide actionable content suggestions

Key Skills Mastered

- SEO Fundamentals & On-Page Logic
- Keyword Research & Volume Validation
- Intent Categorization
- Analytical Marketing Strategy

Qualification Criteria & Guidelines

Requirements to earn your professional badge

Requirement	Standard & Details
Earn Your Badge	Complete Project 2 successfully to unlock advanced marketing modules for next week.
Quality Verification	All keyword sheets, KGR calculations, and search intent mappings must be 100% verified.
Mandatory Bridge	Project 2 serves as the vital bridge to professional portfolio development for every intern.

 **Pro Tip:** Submissions with accurate KGR metrics (< 0.25) and high-intent long-tail keywords will receive top evaluation ratings.

The Strategic Shift

Social Media (Push) vs. Search Engine Optimization (Pull)

Strategy Metric	Project 1: Social Media Strategy	Project 2: SEO Strategy
Core Approach	Push Strategy	Pull Strategy
Market Dynamics	Outbound Dynamics (Interrupting Feed)	Inbound Mechanics (Answering Search Queries)
Primary Goal	Attention & Disruption	Capturing Active Intent
User Mindset	Browsing passively for entertainment	Actively searching for a direct solution

The Logic Skeleton: IPO Model

How search engine algorithms process user demand

1. INPUT

User Query (Demand)

Driven by human curiosity or problem-solving needs typed into search bars.

2. PROCESS

Algorithm Mechanics

Search engines evaluate content through relevance, technical indexing, and domain authority.

3. OUTPUT

The SERP (Result)

Optimized Search Engine Results Page delivering exact solutions to the searcher.

Core Rule: Synchronize Input (User Query) with On-Page Content to control Output (SERP Ranking)

Specificity is Power: Head vs. Long-Tail

91% of all web searches consist of Long-Tail queries

Metric	The Head (Broad Terms)	The Long Tail (Specific Queries)
Query Example	"Internship"	"Remote Data Science Internship B.Tech"
Search Volume	Extremely High	Moderate / Niche
Competition	Fierce (High Authority Sites)	Low Competition
Conversion Probability	Low Conversion Rate	High Conversion Rate

The Math of Least Resistance: KGR

Keyword Golden Ratio for ultra-fast Google rankings

$$\text{KGR} = (\text{allintitle results}) / (\text{monthly search volume})$$

KGR Score	Category	Expected Ranking Impact
< 0.25	Great	High probability to rank in top SERP within days or weeks.
0.25 - 1.00	Moderate	Requires steady content optimization and backlinks.
> 1.00	Bad	Too competitive for new domains to rank easily.

SLIDE 08

The 4 Archetypes of Search Intent

Matching user intent to the correct content type

Intent Archetype	User Motivation	Example Query	Recommended Content
Informational	Seeking knowledge or learning	"What is an API?"	Blog Post / Guide
Navigational	Looking for a specific brand page	"DecodeLabs Login"	Direct Page / Portal
Commercial	Comparing options before purchase	"Best Python Course 2026"	Comparison / Review
Transactional	Ready to act or apply	"Apply for Internship"	Landing Page / Form

Target Domain & Research Toolkit

2026 Focus areas and technical analysis stack

Target Domain Parameters (2026)

- **Languages:** Python (23% share), SQL, Java
- **Roles:** Data Scientist, AI/ML Architect, Full Stack Developer
- **Skills:** Pandas, NumPy, TensorFlow, React, Node.js
- **Project Focus:** Real-time Chat App, E-commerce Store

Research Toolkit

- **Google Keyword Planner:** Volume truth source
- **Ahrefs / Ubersuggest:** Competitor gaps
- **Google Autocomplete:** Real-time intent
- **allintitle: Search Operator:** KGR validation

David vs. Goliath & 5-Step Execution

Outmaneuvering competitors by targeting search gaps

Strategic Niche Positioning: Large aggregators (like Internshala, 4.93M visits) target broad terms. DecodeLabs wins by targeting specific, technical long-tail queries.

5-Step Execution Workflow

1. **Brainstorm:** Select seed technical terms.
2. **Expand:** Use Google Autocomplete & Alphabet Soup method.
3. **Validate:** Measure search volume with keyword tools.
4. **Calculate:** Apply KGR equation (Target < 0.25).
5. **Categorize:** Assign Search Intent archetype and content strategy.

Placing the Beacons & Keyword Calibration

On-page placement and quality calibration

On-Page Beacon Elements

Title Tag: Remote Data Science Internship 2026 | DecodeLabs

URL Slug: www.decode labs .tech /data -science

Meta Description: Apply for the best remote data science internship for B.Tech students...

Bad Keywords (Too Broad)	Good Keywords (High Intent)
✗ Python	✓ Data Scientist salary in India 2026
✗ Free Internship	✓ Python vs Java for backend development
✗ What is code?	✓ Remote Data Science internship for freshers

SLIDE 12

Final Deliverable Structure & Support

Your required submission format for Project 2

Required Submission Sheet Structure (20 Verified Keywords)

Keyword | Search Intent | Monthly Volume | Allintitle Count | KGR Score | Content Type

Key Takeaway

Practical hands-on SEO builds a real-world portfolio that showcases your technical skills to employers. Build the digital highway and unlock Project 3!
